

Assessing Sexual Health: Clemson University

Anna Lipke

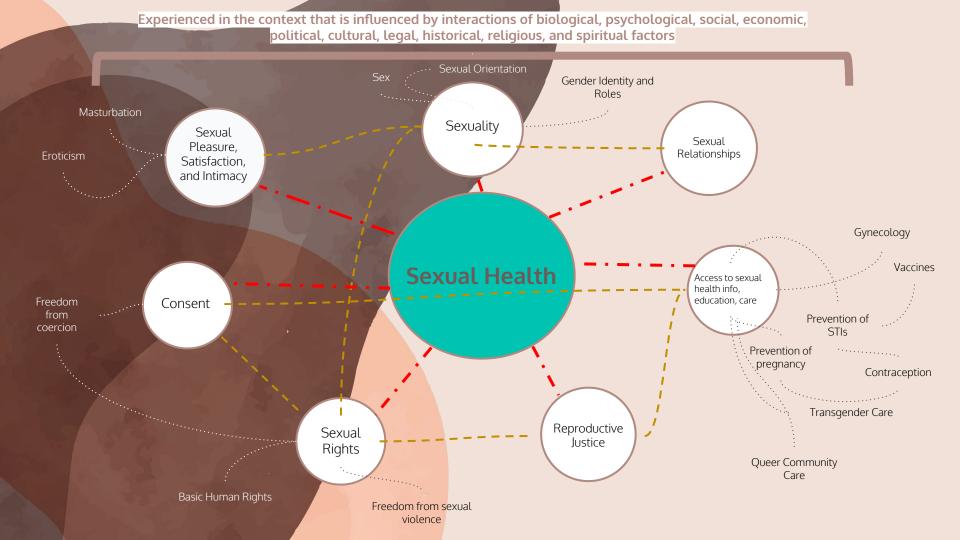

-WHO, 2006

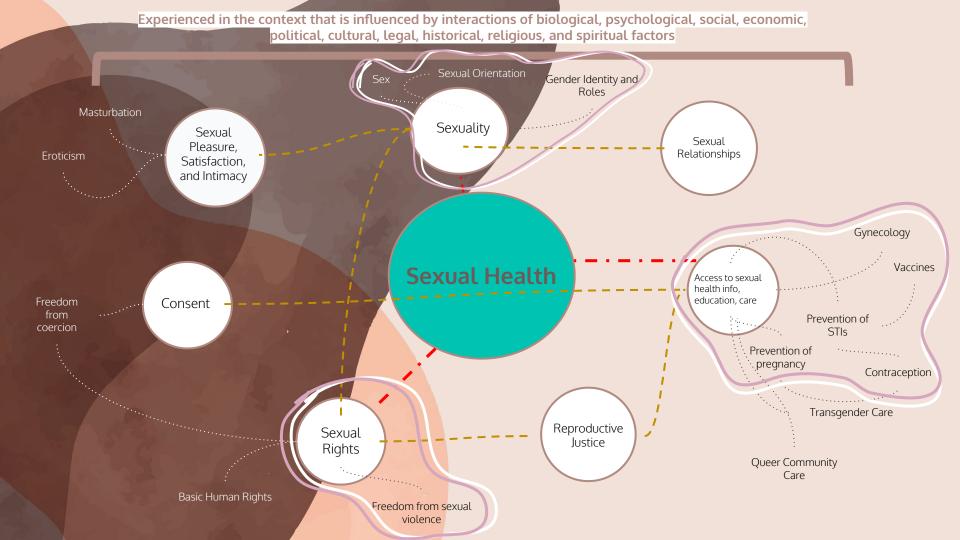

What is Sexual Health?

https://www.nytimes.com/2021/07/14/well/family/lgbt-kids-pediatrician.html

What aspects of sexual health are being assessed (according to the NCHA)?

- Access to sexual health care
 - Contraception Use
 - Physical barrier methods
 - Pregnancy prevention
 - o STIs
 - vaccines
- > Sexuality
 - Sexual behavior
 - Orientation
- Sexual Rights
 - Sexual violence

How is sexual health different experienced differently by queer populations compared to het populations?

Why is this important?

Because health is experienced differently by different populations. The NCHA treats sexual health differently for the two; queer sexual health commonly neglected.

What measures will assess sexual health (SH)?

*We will assess SH by measures that are inclusive to het and queer populations on the NCHA.

Contraceptives/Pregnancy Prevention
Gynecology Sexual Violence
STIs Sexual Orientation

Hypothesis:

Sexual health is experienced differently by queer and het populations within the Clemson student body.

"The perspectives and needs of LGBT people should be routinely considered in public health efforts to improve the overall health of every person and eliminate health disparities."

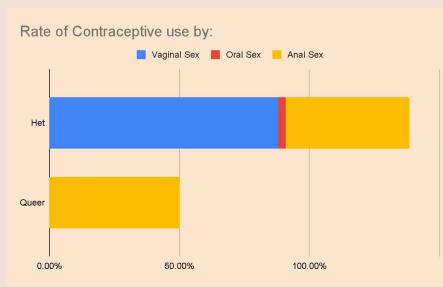

- CDC

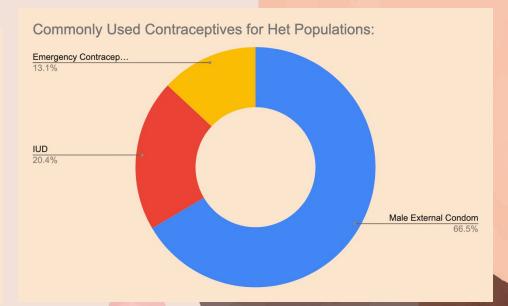

Queer Populations on Campus

- ★ 11% of the <u>undergrad and grad population</u> identified as being somewhere on the LGBTQIA+ spectrum
- ★ Association of American Universities reported that 17% of <u>under/grad</u> populations self-reported as being Bi, Gay, Lesbian, Pansexual, Queer, or Questioning
 - ★ The NCHA reported 21.8% of their national reference population identified as LGBTQ+

Contraceptives

Testing for HIV:

Gynecology

- ★ LGBTQ+ population: **34.33%**
- ★ Het populations: 19.78%

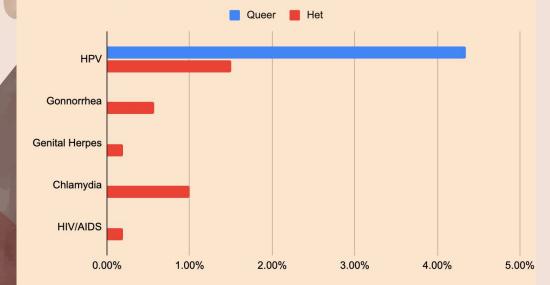

Gynecologic visit with healthcare provider:

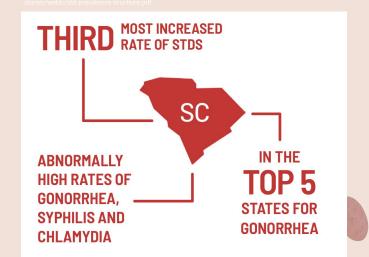

★ LGBTQ+ populations: **42.65**%

★ Het populations: 37.65%

STIs

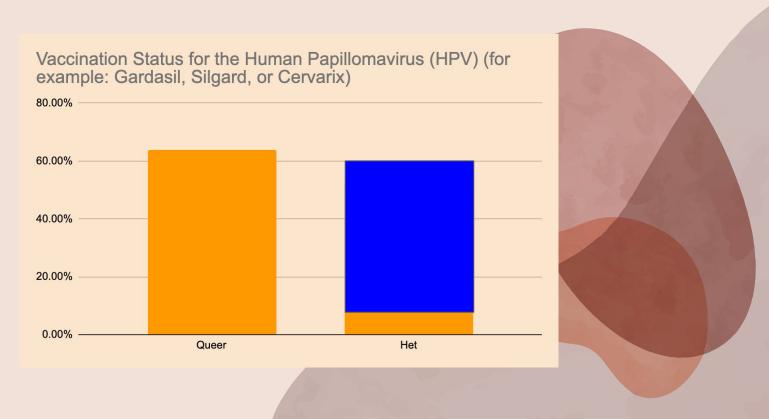

Rates of STIs for Queer and Het Populations

- ★ HPV is the most common STI on college campuses
- ★ According to DHEC 2019 data for the upstate region college students accounted for:
 - 3393 cases of chlamydia
 - o 1181 cases of gonorrhea
- ★ 20% of all college students have HSV-2 (genital herpes) virus

Vaccines

Sexual Assault-Intimate Partner Violence (IPV)

Queer populations were more likely to experience IPV than their het counterparts

2x more likely to experience isolation/limitation from friends/family at the hands of their partner 8x more likely to experience physical sexual coercion 2x more likely to experience drug-induced sexual coercion

Limitations of the NCHA

Sexual Behavior:

Discriminant terminology

"penis in vagina sex"

"penis in anus" sex

*heteronormatively
charged perception of

what "counts" as sex

STIs:

No mention of <u>oral herpes,</u>
<u>syphilis, Trichomoniasis,</u>
<u>Bacterial vaginosis</u>
Questionably <u>low reporting</u> of
STIs

Sexual Violence:

Only assessing the rates of partner violence, excluding of violence perpetrated by strangers

Pleasure:

There are no questions
concerning
Self-pleasure
Partner Intimacy
Sexual Satisfaction

Consent/Sexual Agency:

There is a need for questions asking about regular consent.

Transgender Care:
Hormone therapy
Sexuality:

No option for asexual orientation

Major Takeaways

We need to take holistic approach to sexual health, in care settings, as well as assessment settings like the NCHA

Advocate for regular STI testing for clemson students!

*Incentives for students to get tested: PawPoints, tickets

Inclusivity of care for the queer community:

Health directives/healthcare inclusive to all students of sexual orientations and cover the needs of transgender students

Taking an <u>intersectional approach</u> in educating staff/students on how to create an equitable learning environment for students

Ensuring Clemson is a place for positive identity development:

*Ensuring gender inclusive policies
